Professional Summary

Junior DevOps Engineer with hands-on experience in AWS, Linux, Docker, and Jenkins CI/CD. Skilled in building automated pipelines, containerizing applications, monitoring cloud infrastructure using Amazon CloudWatch and SNS, and automating operational tasks with Bash scripting. Familiar with Kubernetes and Infrastructure as Code, with a focus on deployment reliability, security, and operational efficiency.

Technical Skills

Cloud (AWS): EC2, VPC, IAM, S3, EBS, RDS, Lambda, Elastic Load Balancing, Auto Scaling, Route 53, CloudFront
CI/CD and Build Tools: Jenkins, Maven, SonarQube, Nexus, GitHub Webhooks
Containers and Orchestration: Docker, Docker Hub, Kubernetes
Infrastructure as Code: Terraform, Ansible
Monitoring and Alerting: Amazon CloudWatch, CloudWatch Alarms, Metrics, Amazon SNS, Prometheus, Grafana
Operating Systems and Scripting: Linux Administration, File Permissions, Processes, File Systems, Bash, Shell Scripting
Version Control and Application Servers: Git, GitHub, Apache Tomcat
Networking and Databases: DNS, HTTP/HTTPS, Load Balancing, Subnetting, CIDR, NAT, SQL, Amazon RDS

Professional Experience

DevOps Engineer Intern – Q Spiders Feb 2026 – Present
AWS, Linux, Bash, Docker, Jenkins, Maven, SonarQube, Nexus, CloudWatch, SNS, Git

- Built Jenkins CI/CD pipelines integrating Maven builds, SonarQube quality gates, and Nexus artifact storage to support code quality checks and artifact management.
- Containerized applications using Docker and standardized deployment steps to improve consistency and repeatability.
- Automated recurring operational and deployment tasks using Bash scripts to reduce manual effort.
- Configured Amazon CloudWatch monitoring and SNS notifications to help identify infrastructure issues promptly.
- Worked with AWS services including EC2, VPC, IAM, S3, and Lambda, applying least-privilege IAM practices where appropriate.
- Troubleshot Linux-based servers, including deployment issues, file permissions, processes, and routine administration.

Projects

1. End-to-End CI/CD Pipeline with Docker and Kubernetes
GitHub Actions, Docker, Kubernetes, Trivy, SonarCloud GitHub

- Automated CI/CD workflows using GitHub Actions to run tests, build Docker images, scan vulnerabilities, and deploy applications to Kubernetes.
- Implemented multi-stage Docker builds to optimize image size and integrated Trivy security scanning to identify critical container vulnerabilities.
- Configured Kubernetes rolling updates, readiness and liveness probes, and GitHub Secrets for secure deployments.

2. Three-Tier AWS Architecture using Terraform
AWS, Terraform, VPC, EC2, ALB, RDS, Auto Scaling GitHub

- Designed a three-tier AWS architecture across two Availability Zones using reusable Terraform modules.
- Configured public and private subnets, Application Load Balancer, Auto Scaling, and Amazon RDS with security groups.
- Configured remote Terraform state storage using Amazon S3 and separate development and production configurations.

3. AWS Infrastructure Monitoring and Alerting System
AWS CloudWatch, SNS, EC2, IAM, Linux, Bash GitHub

- Configured CloudWatch metrics and alarms to monitor AWS infrastructure and detect resource utilization issues.
- Integrated Amazon SNS with CloudWatch alarms to send notifications when configured monitoring thresholds were breached.
- Used Linux commands and Bash scripting to support operational monitoring and routine administration.

Education

B.Tech in Computer Science and Engineering 2026
Siddharth Institute of Engineering and Technology
CGPA: 8.2/10

Achievements and Publications

- **Best Paper Award – ICICC 2026:** Received the Best Paper Award for the research paper titled *HealthGuard: A Collaborative Machine Learning Approach to Secure Medical Information Across IoT-Driven Healthcare Systems.*
- **Publisher: Springer Nature** **View Publication**

Certifications

- **SQL (Basic)** – HackerRank HackerRank
- **Operating System Fundamentals** – NPTEL NPTEL
